Summary

As a full-stack software engineer, I'm passionate about creating innovative solutions and delivering seamless user experiences across a wide range of applications and technologies. That passion has matured over the years, but it notably materialized during my time at Texas A&M.

As a member of the class of '21, I graduated with a Bachelor of Science in Computer Science and minors in Cybersecurity and Math. I worked diligently all through college, earning a computer science GPA of 4.0 and a cumulative GPA of 3.9. I expanded my knowledge base as I completed impactful projects such as creating a website for a student organization and creating a video game with the Unity game engine and C#. For my senior capstone project, my team collaborated with a mentor from the U.S. Army Futures Command to innovate its program, BRL-CAD, using C and C++. Our team was awarded the 1st-place prize for best project showcase in the entire computer science department for that semester.

Since graduating, I have served as a software developer for BuildOn Technologies, an incredible company which builds online tools like websites and mobile apps for use by home builders nationwide. I develop new features and fix bugs daily for the company's flagship website, VEO Design Studio. This massive web application guides homebuyers as they design their dream home. Regarding the tech stack, I work with it all - from SQL databases to C# in .NET to JS frameworks to styling and even to deploying.

As if a full-time job does not fully satisfy my passion for software engineering, I began developing a 2D RPG computer game called Vizarri as a hobby in early 2022. Made with Unity and C#, this project is highly sophisticated and implements powerful design patterns such as state stack architecture. The project was published to the Steam store in January 2026, with more updates releasing monthly.

As I continue to grow in my career and hobbies, I am committed to exploring new technologies, fostering collaboration with peers and customers, and solving complex problems with best practices in software development. I strive to push boundaries and deliver impactful solutions in everything I do.

Experience

BuildOn Technologies

Full-Stack Software Developer

January 2022 - Present (4 years 5 months)

Houston, Texas, United States

Responsibilities:

- Build new features and fix bugs for the company's flagship website VEO Design Studio. It is a massive web app allowing homebuyers to design their dream home online. Sales counselors and designers of companies in the home-building industry collect the homebuyer selections so that construction may begin.
- Bring new developers up to speed quickly.

Sample of Major Projects:

- Rework the website's largest module, Design My Home, to support sub-area selections for greater granularity.
- Rework the 3D visualizer in Design my Home to load only once instead of once per room entry (this cut load times drastically). Communicated efficiently with our 3rd party visualization vendor to help make this a reality.
- Designed and implemented an elaborate theming system that manipulates colors and fonts across the whole site. Each builder can select a theme to use. Users that can switch builders will see the active theme change instantly at runtime. Allowed theme creation to be offloaded from developers to theme designers by creating a custom theme editor and making individual CSS variables able to be updated dynamically from the database. This system is loved by countless current and prospective builder customers.

Tools and Technologies:

- Computer Languages: SQL, C#, JavaScript, TypeScript, HTML, CSS
- Development Platform: .NET
- Front-end Frameworks: Durandal, Aurelia, Angular
- Database: Microsoft SQL Server

- Others: API tests with Postman, Azure DevOps, Git, Agile and Scrum techniques

BuildOn Technologies

Full-Stack Software Developer

May 2021 - August 2021 (4 months)

Houston, Texas, United States

Responsibilities:

- Build new features and fix bugs for the company's flagship website VEO Design Studio. It is a massive web app allowing homebuyers to design their dream home online. Sales counselors and designers of companies in the home-building industry collect the homebuyer selections so that construction may begin.
- Work alongside and learn from experienced developers to sharpen skills.

Sample of Major Projects:

- Redesign the interactive feature flag page in the Admin portal to support new functionalities.
- Create a new interactive page in the Admin portal called Builder Feature Audit to more easily analyze which feature flags our customers are using.
- Create a popup that can be opened for each estimated item viewable in the Design My Home module of VEO Design Studio. The popup enumerates pricing by sub-area rather than displaying one conglomerate price for the area.

Tools and Technologies:

- Computer Languages: SQL, C#, JavaScript, TypeScript, HTML, CSS
- Development Platform: .NET
- Front-end Frameworks: Durandal, Aurelia
- Database: Microsoft SQL Server
- Others: API tests with Postman, Azure DevOps, Git, Agile and Scrum techniques

iD Tech Camps

Instructor

June 2019 - August 2019 (3 months)

Houston, Texas Area

- Supervised and instructed kids (ages 7-17) in an entertaining, overnight camp environment at Rice University.
- Taught primarily the course "Java Coding Minecraft Mods".

- Received overwhelmingly positive course evaluations from students and parents which reflected my impact on the students' experiences.
- Offered a position as Lead Instructor for Summer 2020. However, due to COVID-19, the camp was canceled.

Plato's Closet

Cashier

May 2016 - August 2016 (4 months)

The Woodlands, Texas

- Assisted customers, operated the cash register, organized merchandise, supported daily store operations, and helped train new employees.

Plato's Closet

Cashier

May 2015 - August 2015 (4 months)

The Woodlands, Texas

- Started in an entry-level position but was promoted to cashier within one month.
- Assisted customers, operated the cash register, organized merchandise, and supported daily store operations.

Education

Texas A&M University

Bachelor of Science - BS, Computer Science · (August 2017 - December 2021)

Concordia Lutheran High School

· (August 2013 - May 2017)
