EXPERIENCE

Paycom

June 2023 – February 2026

Software Developer

Dallas, TX

- Built and owned backend features for a **C#** and **.NET** payroll and tax calculation engine, implementing rules-driven federal, state, and local tax calculations across 100+ year-end tax form fields for 30K+ enterprise clients, using object-oriented programming (OOP) and test-driven development (TDD) to achieve 95%+ unit test coverage.
- Led the migration of a legacy **PHP** tool to a modern **React** frontend with reusable functional components, hooks and Context API state management, and UI mockup contributions, preserving 100% of existing functionality, adding new features, and reducing on-screen clutter by 70%.
- Reduced manual labor by over 50% in payroll and tax software systems by designing **RESTful APIs** and automating **ASP.NET** microservices, backed by complex **SQL** scripts for data extraction, transformation, and reporting.
- Owned and supported a **C#** and **ASP.NET** payroll and tax document fulfillment service responsible for ~25% of annual Q1 revenue, serving as the technical point of contact for cross-team questions, integrations, and troubleshooting.
- Resolved 70+ production hotfixes with 90% SLA adherence during and outside of on-call rotations by performing root cause analysis through complex **SQL** queries and **Splunk** log investigation, then deploying fixes and data corrections to minimize client impact.
- Collaborated with cross-module dev teams, product managers, and stakeholders in an Agile environment, gathering requirements, refining specifications, and reviewing frontend mockups with implementation feedback and recommendations to deliver high-quality software solutions.

Tokio Marine HCC

May 2022 – August 2022

IT Intern

Houston, TX

- Automated cybersecurity vulnerability tracking by building a **Python** API integration that generated tickets at scale (11,000+ assets).
- Created a security-hardened golden **AWS** image for company-wide usage.
- Developed a custom image pipeline using **AWS EC2 Image Builder**.

PROJECTS

LLM Wiki Trading Second Brain

- Architected an LLM-driven knowledge management system using **Obsidian** and **Claude Code**, replacing naive RAG with a cross-linked knowledge graph to reduce redundant processing and compound knowledge over time.
- Designed and built a full-stack trade analytics dashboard using **FastAPI (Python)**, **React**, and **TypeScript** to visually display data from the LLM Wiki.
- Built end-to-end with an AI-augmented workflow: prototyped layouts in **Figma**, drove implementation with **Claude Code**, while owning all product, API, and architecture decisions.

KT's Portfolio – [link](#)

- Built a static portfolio site with **Astro** and **React**, applying selective hydration to ship zero JS for static sections while keeping interactive islands fully reactive.
- Leveraged AI tooling to elevate design and implementation quality, prototyping with **Claude Design** and building the codebase with **Claude Code**.

EDUCATION

University of Houston

August 2019 – May 2023

Bachelor of Science in Computer Science with Minor in Mathematics (GPA: 3.8 / 4.0)

Relevant Coursework: Software Engineering Principles, Data Structures and Algorithms, Web Development

TECHNICAL SKILLS

Languages and Frameworks: C#, Python, JavaScript, TypeScript, SQL, React, .NET, ASP.NET

Tools: Node.js, Docker, AWS, Git/GitHub, Postman, Jira, Confluence, Claude Code, MySQL

Concepts: Microservices Architecture, RESTful APIs, CI/CD, Agile Development, SOLID principles, OOP, TDD

Certifications: AWS Cloud Practitioner
