John Michael

Senior .NET & Azure Engineer | Full-Stack (React/Angular) | Cloud-Native APIs & Microservices | Legacy Modernization | Event-Driven Architecture

Houston, Texas, United States

Summary

Senior Full-Stack .NET Developer specializing in cloud-native systems, scalable APIs, and modernizing legacy platforms. I build production-ready software that handles real business complexity — from high-volume claims processing to secure mobile integrations and event-driven architectures. My experience spans C#, ASP.NET Core, Azure Functions, Service Bus, React, Angular, SQL, Redis, CI/CD, and enterprise authentication systems including Azure AD B2C. What I deliver:

- Cloud-native architectures using Azure Functions, Service Bus, serverless workflows, and distributed systems
- High-performance APIs with optimized SQL, caching, and telemetry
- Legacy modernization from .NET Framework to .NET Core with automated pipelines
- Real-time mobile and hardware integrations (React Native, sensors, cross-platform communication)
- Secure authentication using Azure AD B2C, token-based access, and enterprise SSO
- Data-driven systems integrating Snowflake, SQL Server, and event-scoring algorithms

Strengths:

- End-to-end ownership of features and systems
- Clear communicator with strong documentation habits
- Fast learner who adapts to new stacks and business domains
- Experience mentoring interns and junior developers

Open to: Full-Stack Engineer, .NET Developer, Cloud Engineer, Backend Engineer, API/Microservices Developer.

Experience

PoMful

Full Stack Developer

December 2024 - October 2025 (11 months)

Houston, TX

- Implemented Azure AD B2C SSO across Shopify and mobile ecosystems
- Built serverless Azure Functions with Service Bus Queue triggers for event-driven workflows
- Integrated Azure Communication Services for two-way SMS and email

- Managed Azure SQL with performance tuning and monitoring
- Built CI/CD pipelines enabling automated API deployment and testing
- Developed REST APIs, SendGrid integrations, and user/session analytics
- Built React Native mobile features with real-time check-in/pause/resume
- Implemented cross-platform hardware sensor communication

Coverys

Software Engineer

January 2022 - December 2024 (3 years)

Remote

- Built ASP.NET Core microservices and automated claims processing using Azure Service Bus
- Designed risk scoring algorithms processing 50,000+ records/day with Azure Functions
- Developed REST APIs integrating Snowflake with React dashboards for 500+ users
- Migrated legacy .NET Framework apps to .NET Core, enabling HIPAA-compliant workflows
- Implemented Redis caching, improving API performance by 65%
- Led code reviews, mentored interns, and established API versioning standards
- Integrated Contrast Security for continuous vulnerability monitoring

Med-IQ

Software Engineer

January 2022 - December 2024 (3 years)

Boston, MA

Sam's Club

Software Engineer

January 2019 - January 2022 (3 years 1 month)

Humble, TX

- Modernized internal invoicing system from .NET Framework to .NET 6 + Angular 15
- Built IoT asset monitoring using Azure AD + IoT Hub for 5,000+ devices across 200+ locations
- Delivered Power BI dashboards for real-time inventory insights for C-suite executives
- Led AWS-to-Azure migration with automated test suites ensuring zero downtime

Microsoft

Microsoft Student Ambassador

January 2019 - January 2022 (3 years 1 month)

Houston, TX

I help fellow students build their coding skills and learn cloud technologies (Azure). I organize hackathons that aim to solve real-world challenges.

Google Developers

Google Developer Student Club Lead

June 2019 - September 2021 (2 years 4 months)

Houston, TX

As a Google Developer Student Club Lead, I managed a university-based community for students interested in Google developer technologies. Students from all programs learned in a peer-to-peer environment as we built solutions for local businesses and our community — bridging the gap between theory and practice.
