Mairim Delgado Muniz

Software QA Engineer | 10+ Years in Manual & Automation Testing |
Energy & Financial Systems | ISTQB Certified
Spring, Texas, United States

Summary

I'm a Software Quality Assurance Analyst with 10+ years of experience ensuring the delivery of reliable, high-performing applications across the energy, financial, and software industries. My career has spanned both manual and automation testing, giving me a strong foundation in the full software test lifecycle (STLC) — from test planning and execution to defect management and release readiness.

I specialize in:

- # Manual & Automation Testing – Functional, Regression, UAT, Performance, and Integration
- # Tools & Frameworks – Jira, Azure DevOps, TestRail, Selenium, Postman, SOAP UI, JMeter, SQL
- # Agile/SDLC Practices – Active contributor in sprint planning, daily standups, retrospectives
- # Industry Expertise – Energy sector (real-time drilling analytics, equipment health monitoring, managed pressure drilling) and Financial systems (credit risk, upstream revenue)

What sets me apart is my ability to bridge business requirements with technical execution — collaborating seamlessly with developers, product managers, and stakeholders to ensure systems not only pass QA but also meet real-world operational demands. I thrive in fast-paced Agile environments, where attention to detail, problem-solving, and clear communication are critical to delivering high-quality results

Experience

BuildOn Technologies
Quality Assurance Engineer
January 2026 - Present (5 months)
Houston, TX

Indigo Beam Consulting

Functional QA tester

November 2023 - September 2025 (1 year 11 months)

Houston, Texas, United States

Functional QA Tester Specializing in Equipment Health Monitoring & Managed Pressure Drilling Solutions for Energy Industry

- Designed, executed, and maintained functional, regression, and system-level test cases for drilling and equipment health monitoring applications.
- Utilized Jira for test case management, tracking defects, and maintaining traceability between requirements, test cases, and execution results.
- Collaborated closely with developers and product managers to understand system behavior and validate functionality against field requirements.
- Performed thorough manual testing on real-time drilling analytics and predictive maintenance platforms.
- Conducted data validation and integration testing to ensure seamless communication between sensors and backend systems.
- Identified, reported, and tracked defects through Jira, working with the development team to ensure timely resolution and re-verification.
- Participated in sprint planning, daily standups, and retrospectives as part of an Agile team to ensure testing is integrated throughout the SDLC.
- Contributed to the continuous improvement of QA processes and documentation, including updating test plans and maintaining testing best practices.
- Supported release readiness by verifying bug fixes, performing smoke tests, and validating build deployments in test environments.

Quorum Software

Software Quality Analyst

January 2020 - March 2023 (3 years 3 months)

Houston, Texas, United States

Quality Assurance Analyst for Upstream Revenue products (desktop and web applications) based on energy Industry.

Created detailed, comprehensive, and well-structured test plans and test cases using TestRail to adequately cover the features of the upcoming release and meet project deadlines.

- Created, updated, and ran manual test cases for end-to-end functional, smoke, regression, compatibility, GUI, and performance tests that successfully reduced rework and increased time available to find critical issues.

- Reviewed business specifications and technical design documents with internal teams to identify new system requirements.
- Led the estimation, planning and coordination of the test activities, such as the test coverage map and the regression test.
- Detected, and monitored defects or bugs using Azure DevOPs highlighting project risks and quality concerns.
- Analyzed the data displayed in the user interface with the data obtained from SQL and made sure they matched perfectly.

Bayport Laboratories

IT

August 2018 - July 2019 (1 year)

Houston, Texas

- Installed and configured computer hardware, software, systems, networks, printers, and scanners to ensure the company runs smoothly.
- Responded promptly to service issues and requests and provided technical support across the company.
- Repaired and replaced equipment as necessary, set up accounts for new users, and evaluated and tested new technologies to improve the performance of the company.

Sachin Systems

Tester

February 2018 - August 2018 (7 months)

Houston, Texas

- Conducted manual testing on mobile devices, including both iOS and Android platforms.
- Assisted in creating and verifying test cases, and generated reports to effectively communicate technical issues and the results of quality assurance activities.
- Metrics such as the number of devices tested, test case coverage, defect density, and test execution time were applied to ensure thorough testing and identify areas for improvement.

Equifax Ecuador

Quality Assurance Analyst / Tester

November 2015 - December 2016 (1 year 2 months)

Quito, Ecuador

Quality Assurance Analyst for Web, Web Services, ETL, Data Host and Desktop apps based on financial risks and credit reports.

- Implemented, wrote, and documented test cases to identify bugs, resulting in a smoother end-user experience.
- Conducted exploratory testing to evaluate robustness and functionality of products, ensuring they met the required standards.
- Designed, developed, and implemented automated scripts using Selenium WebDriver, TestNG and Junit with Java helped increase testing efficiency and reduce manual errors.
- Performed API Testing with SOAPUI and POSTMAN ensured that the application programming interface worked as intended.
- Executed and wrote SQL queries into the test environment databases to verify successful backend functionality.
- Detected and tracked software defects and issues with Jira helped ensure all issues were logged and resolved in a timely and efficient manner.

CESOL

System Analyst / Quality Assurance Analyst / Tester

September 2012 - July 2015 (2 years 11 months)

Havana, Cuba

For (CESOL) worked as: Tester of Cuban Operating System, GNU/Linux Nova. July 2013 - July 2015.

- Analyzed user stories/use cases/requirements for validity and feasibility.
- Designed and executed test cases covering different tests such as Black box, Functional, Portability, Regression, Stress, and Load testing using JMeter which helped identify bugs and defects early in the development process.
- Designed Automation scripts streamlined the testing process and saved time, while quality engineering principles ensured that the product met the required quality standards.
- Built and defined the Test Plan, Test Strategy, and test cases based on agile methodology like Scrum provided a clear and organized approach to testing.
- Provided Support and documentation for the release of GNU/Linux Nova, the Cuban operating system, helped ensure a smooth and successful release.

Systems Analyst of the Xerberos Project.

September 2012 - July 2013.

- Analyzed, designed, modelled systems and performed requirements engineering.
- Applied development methodologies like SCRUM, RUP, and XP, tools like Rational Rose and Visual Parading, and modelling languages like UML.

- Managed code version control using SVN.
- Worked in the areas of Process: PPQA, CM, SAM, REQM, PP, and PMC for the certification of CMMI level 2 in software projects.
- Developed documentation and ensured system maintenance.

Education

Universidad de las Ciencias Informáticas

Bachelor's Degree in Computer Science, Computer Science · (2007 - 2012)
